

Mechanics Research Communications

Sponsored by CISM, International Centre for Mechanical Sciences

Mechanics Research Communications publishes as rapidly as possible manuscripts of high standards but restricted length. It aims at providing a fast means of communication and of exchange of ideas among workers in Mechanics, at offering an effective method of bringing new results quickly to the public and at establishing an informal vehicle for the discussion of ideas that may still be in the formative stages.

Mechanics Research Communications will publish both scientific and applied contributions.

In either category, papers may be one of three types:

- 1. Complete:** Self-contained, normally no more than about twelve manuscript pages long. The essence and motivation of the communication must be made clear in a first section, called 'Introduction', of length appropriate to that of the entire article and written so as to be understandable to the majority of workers in Mechanics. No further abstract is required. The remainder of the contribution may, of course, be addressed to specialists.
- 2. Work in Progress and Preliminary Results:** Accounts of current research and of tentative results even if of a conjectural but well documented nature, about three or four manuscript pages in length.
- 3. Letters:** Not over two manuscript pages long usually dealing with previously printed contributions or with matters of general interest to the Mechanics community, to be written in non-aggressive language. After acceptance of letters referring to previous communications, the authors of the original articles will be informed and allowed four weeks time to submit a written reply. The letter and the reply will be printed simultaneously.

The field of Mechanics will be understood in a broad sense, no attempt being made to limit it or to provide it with a precise definition. It will encompass the behavior of fluids, solids, particles, continua, rigid bodies, mechanisms, systems and so forth. It will include theoretical as well as applied and experimental researches, whether aimed at fundamental scientific advances or at practical engineering results.

Bibliographic & Ordering information
ISSN: 0093-6413
Imprint: ELSEVIER
Commenced publication 1974
2011, Volume 38, 8 issues

Audience

Mechanical, aeronautical structural, civil and materials engineers, materials scientists.

Top 5 Cited Articles

Published in the last five years

40 cites - Determination of limit cycles for a modified van der Pol oscillator

Volume 33, Issue 1, 2006, pp 93-98
D'Acunto, M.

40 cites - Manipulation of particles using dielectrophoresis

Volume 33, Issue 1, 2006, pp 108-122
Kadaksham, J. | Singh, P. | Aubry, N.

36 cites - Prediction of 42CrMo steel flow stress at high temperature and strain rate

Volume 35, Issue 3, 2008, pp 142-150
Lin, Y.C. | Chen, M.-S. | Zhong, J.

34 cites - Finite time stability analysis of PD[alpha] fractional control of robotic time-delay systems

Volume 33, Issue 2, 2006, pp 269-279
Lazarevic, M.P.

29 cites - Unsteady flow of viscoelastic fluid with fractional Maxwell model in a channel

Volume 34, Issue 2, 2007, pp 210-212
Qi, H. | Xu, M.

Benefits of Publishing with Elsevier

- Easy online submission

Submit your paper online at:

www.elsevier.com/locate/mechrescom

The editorial process is performed electronically, which shortens the refereeing time. Submissions are free of charge

- Fast maximum online visibility, accessible to over 17 Million readers

After acceptance your article reaches your peers through ScienceDirect (www.sciencedirect.com), the world's leading provider of electronic scientific information. Your article is immediately linkable and citable using the article's Digital Object Identifier.

- Liberal copyright policy

Elsevier's copyright statements allow for posting on pre- and post-print servers, as well as personal homepages and institutional repositories, provided a link to the official version on ScienceDirect is also indicated. Please visit <http://www.elsevier.com/authorsrights> for a full overview of Elsevier's copyright policy.

- More services for authors, proofs, online tracking, free (e-)offprints

It is easy to check the progress of your paper online (<http://ees.elsevier.com>) When your article is published, you will no doubt want copies of it for your own use and distribution. In the case of most journals, Elsevier will offer you a free e-offprint; and paper offprints can also be ordered.

- Research4Life - Access to research at free or little cost for developing countries

Elsevier partners with organizations around the world to improve the exchange of information and transmission of knowledge. As a leading contributor to Research4Life (www.research4life.org), which includes the three programs HINARI, AGORA, and OARE, Elsevier partners with more than 150 publishers, WHO, FAO, UNEP, Yale, Cornell, and the International Association of STM Publishers. Research4Life currently provides more than 7500 journals, ensuring that scientists, policymakers, healthcare workers and librarians at thousands of institutions in the developing world have access to online peer-reviewed research at no or very low cost.
